

MAYU BEATZ

QUICK START GUIDE

Essential Mixing Chains

You just grabbed 8 Essential Mixing chains — pro mixer chains built entirely from FL Studio's stock plugins. Drop one on the matching track and your mix falls into place. No third-party plugins needed.

INSTALL IN 60 SECONDS

- 1 Unzip the folder.
- 2 Move the chains into your FL mixer-preset folder: **Documents → Image-Line → FL Studio → Presets → Mixer states** (make an "Essential Mixing" subfolder if you like).
- 3 In FL, open the **Mixer** (F9) and select the track you want to treat. Find the chain in the Browser under **Mixer presets** and **drag it onto the track** — or use the mixer menu ▶ **File ▶ Open mixer track state**. Load the chain that matches your source (Bass, Drums, Orchestral...).

Full walkthrough in the install video.

DIAL IT IN FIRST

A few seconds of setup and each chain sits right on your source — do this **before** you commit.

- ◆ **Match the chain to the source.** The Bass chains are voiced for bass, the Drums chains for drums, and so on — load them where they belong.
- ◆ **Level it in.** Get your source hitting the mixer track at a healthy level — how hard you drive the chain changes the result.
- ◆ **Make it yours.** Every plugin on the track is fully adjustable — nudge the EQ or comp to taste for your track.
- ◆ **Treat them as a pro starting point.** They get you 90% there in one click.

THIS IS JUST A TASTE

You tried **8 chains across 4 sources**. The full **Infinity Suite** has Essential Mixing Chains for every part of your mix — plus 130+ vocal presets, mastering chains, VIP patches, recording templates, synth presets, and **7,000+ custom assets** in total. All from your stock plugins. One time, yours forever.
